Isle to Host Innovation Pavilion at Vatten2025 in Gothenburg

Isle will curate the Innovation Pavilion at [Vatten2025](#), Sweden's largest meeting place for the water and wastewater industry, taking place 21–23 October 2025 in Gothenburg. The event brings together decision-makers, researchers, utilities, and industry leaders to tackle the water sector's biggest challenges, share best practice, and explore new opportunities.

Located at the heart of the exhibition hall, the Isle Innovation Pavilion will showcase tech solutions from leading companies around the world.

Exhibitors will present their technologies both at their stands and through demonstrations, giving visitors the opportunity to experience innovation in action. Isle will also host a series of talks on the Water Environmental Transition Stage, highlighting transformative technologies and their real-world impact, from in-line condition assessment to the circular wastewater systems of tomorrow. With the Trial Reservoir Initiative and other partners joining, the Pavilion reflects Isle's belief that through collaboration we can go further, faster.

Vanessa van Rossum, Principal Consultant at Isle, said: *"The Isle Innovation Pavilion at Vatten2025 showcases technologies that can make a real difference to the water industry. The Pavilion brings together leading technologies and key players in the water sector, providing a space to exchange ideas around shared challenges, common visions, and future perspectives—and fostering interaction in an open, dynamic, and engaging way."*

Vatten2025 will also feature a fundraising initiative by Svenska Mässan and [WaterAid](#), with donations made in lieu of a gift of appreciation for speakers. Donations will support WaterAid's mission to expand global access to clean water and sanitation.

Isle invites attendees to visit the Innovation Pavilion and join the conversation. To learn more or arrange a meeting, please contact Vanessa van Rossum, Principal Consultant at Isle, at vanessa.vanrossum@isleutilities.com.

ENDS.

Notes to Editors:

About Isle

Founded in 2010, Isle is a global innovation consultancy dedicated to protecting the world's most precious resource, water. Led by CEO Dr Ben Tam, we work with businesses, governments and utilities to de-risk the development, commercialisation and adoption of breakthrough water technologies that accelerate the water environmental transition. With a global network of independent experts, Isle bridges deep technical knowledge with commercial insight to help clients accelerate innovation and drive real-world impact. We collaborate across sectors, borders, and systems, ensuring businesses don't just adapt, but thrive. In a world of noise and complexity, we empower bold, informed decision-making that delivers lasting water solutions.
