

# What to Expect at an Isle Innovation Hub

*Vatten (NEU), Toronto, ACE (US)*

One of the first things you'll notice walking into one of Isle's Innovation Hubs is the buzz. This isn't the usual tradeshow atmosphere: the space sparks with activity, bringing together familiar faces and others whose paths may otherwise never have crossed. Soak up the energy.

This is our community. Isle Innovation Hubs are built around curiosity and a shared belief that technological innovation can make the water space smarter and more sustainable.

Our Hubs are a catalyst for collaboration, bringing together the brightest minds and most up-and-coming technologies of the water sector. Our centralized "hub" design provides a place for thought leaders and technology companies alike to share creative ideas and foster connections. Conversations spring up between startup founders and engineers, researchers and innovators, and industry veterans alike. Informative and fun sessions flow through the program, designed to stimulate innovative thinking and best practices. Ideas are swapped around technology and innovation, the water environmental transition, possibility.

At the Innovation Hub you'll meet the rising stars of water and related industries. These are technology companies and innovators who are already proving their ideas through pilot projects or full-scale installations. They're small companies with big visions, and they bring fresh thinking to some of our biggest water challenges. Each offers a technology with a clear advantage over traditional solutions. The Innovation Hub's mission is to shine a spotlight on these lesser-known breakthroughs and give them a chance to be seen by the wider industry.

Come join us, and meet the next generation of problem-solvers who are making waves long before they make headlines.
